

BioMin® F clinically proven to be superior in the management of dentine hypersensitivity

PATEL VR, SHETTAR L, THAKUR S, GILLAM D & KAMALA DN (2019)

J ORAL REHABIL. 2019 JUN 24. EPUB 2019 JUN 24

Method

A total of **75 patients** clinically diagnosed with **dentine hypersensitivity** were randomly divided into three groups:

Group A 5% fluorocalcium phosphosilicate (BioMin® F)

Group B 8% arginine and calcium carbonate*

Group C Placebo

Dentine hypersensitivity was evaluated by tactile and evaporative stimuli, and a visual analogue scale (VAS) was used for evaporative stimuli at pre-baseline, baseline (15 days) and post-baseline (1 month).

Conclusion

BioMin® F showed a **better reduction of dentine hypersensitivity** than the other two groups.

BioMin® F was proven to be **clinically superior** to the other toothpastes in the **management of dentine hypersensitivity**.
