BIOMEDICINES 2023, 2227-9059/11/7/1992

Method

7 reports were included in this systematic review with set criteria:

- Randomized controlled trials with adult participants diagnosed with dentine hypersensitivity.
- Experimental group containing bioactive glass and a control group with a placebo or desensitizing agent not containing bioactive glass.
- Patient follow-up and quantified pain ratings required.

Conclusion

BioMin® F is the **best long-term treatment option** for Dentine Hypersensitivity in preference to Pro-Argin™ and strontium acetate.

BioMin® F is **more effective** than NovaMin™ in reducing the symptoms of dentine hypersensitivity.
